

palliAGEDgp App

What is palliAGEDgp

palliAGEDgp is a free app that provides information to help GPs manage and care for patients in the final stages of their life.

Who should use the app

It is designed for use by all GPs providing palliative care to older Australians.

Using the app

It is simple to use and easy to navigate quickly. Navigation is based on these three clinical processes;

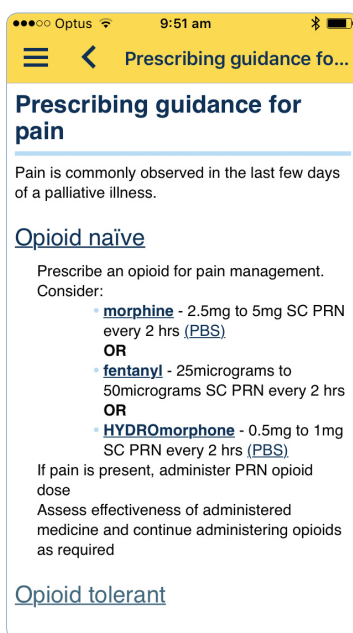

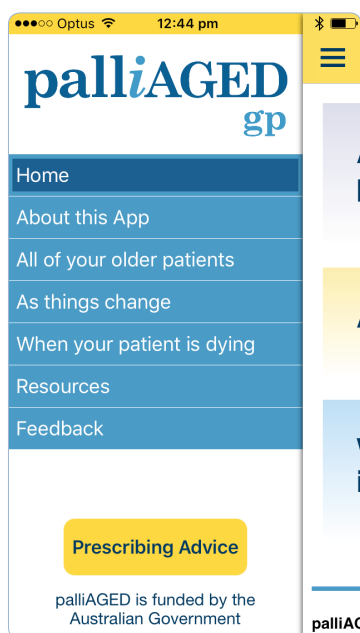

- Advance Care Planning
- Case Conferencing
- Terminal Care Management

What makes palliAGEDgp different?

palliAGEDgp can be viewed on any smart device or computer making the information more accessible to GPs across Australia, including those in rural and remote areas, in a timely way and at the point of care. As the app is web-based, it can be updated as new evidence and resources are released.

How can I get the app?

The palliAGEDgp app can be downloaded from iTunes and Play online app stores. GPs without a smartphone or who prefer to use web resources, can view the content at apps.caresearch.com.au/palliAGED/home

Launched 30 April 2015

90% of GPs found smartphones to be **'very useful'** to help them in their clinical duties
